PROTO FILE

SERVICES

```
service SRV
{
    PRINTING BOOK
     rpc get_book(lim)returns(dispbook){}

    INSERTING BOOK
     rpc ins_book(book)returns(ack){}

    INSERTING REVIEW
     rpc ins_review(review)returns(ack){}

    PRINTING REVIEW
     rpc get_review(rv)returns(dispreview){}
}
```

MESSAGE TYPES

inserting book in couchbase

```
message book{
      int64 book_id=1;
      string name=1;
      repeated string author=2;
      string short_desc=3;
}
```

getting the limit

```
message lim{
      int64 l=1;
}
```

getting the books

```
message dispbook{
      repeated book book_list=1;
      ack ak= ;
}
```

inserting the review

```
message review{
      int64 book_id=1;
      string name=2;
      int64 score=3;
      string text=4;
}
```

getting the bookid for review

```
message rv{
	int64 book_id=1;
}
```

getting the reviews

```
message dispreview{
	repeated review review_list=1;
	ack ak=2 ;
}
```

pass/fail

```
message ack{
	int64 status=1;
	string msg=2;
}
```

MICROSERVICES

MICROSERVICE 1

Mux handler which handles HTTP equests
Connects to grpc Server
forwards the http requests
receives data from grpc server

MICROSERVICE 2

Accepts grpc client
receives the http requests
forwards the requests to DB
receives data from DB
forwards the data to grpc client

CLIENT

Starts an HTTP server with a given address and GorillaMux handler

Creates a grpc channel to communicate with the server
Creates A Struct for parsing from json

```
type book struct{
	Name string`json:"name"`
	Author []string`json:"author"`
	Shortdesc string`json:"shortdesc"`
```

```
}
type review struct{
	Name string`json:"name"`
	Score int64`json:"score"`
	Text string`json:"text"`
	Id int64`json:"id"`
}
```

Creates mux HandleFunc to respond to the HTTP request

insbook	**POST**	**Sending data to server for book insertion**
getbook	**GET**	**Receiving data from server for getting books**
insreview	**POST**	**Sending data to server for review insertion**
getreview	**GET**	**Receiving data from server for getting review(s)**

eg:
For inserting a book used a function defined in handlefunc
sends the data by using POST method
sent it to server
waits for the acknowledgement i.e pass/fail

SERVER

Creates a grpc server and waits for connection
Defines the services which will communicate with couchbase sdk for R/W operations and returns to the client

Insbk	**Send data to DB sdk for book insertion**
Insrv	**Send data to DB sdk for review insertion**
Getbk	**Receives data from DB sdk for getting books**
Getrv	**Receives data fom DB sdk for getting reviews**

eg:
For inserting a book
Define the service rpc insbk(addbook)returns(ack){}
Contains the data to be inserted in db
returns the acknowledgment integer to the client i.e pass/fail

COUCBASE sdk

Connects to DB
Creates Bucket

Creates Scope
Creates Collection
Creates primary key

Creates A Struct for DB

```
type book struct{
	Name string`json:"name"`
	Author []string`json:"author"`
	Shortdesc string`json:"shortdesc"`
}
type review struct{
	Name string`json:"name"`
	Score int64`json:"score"`
	Text string`json:"text"`
	Id int64`json:"id"`
}
```

defining functions for communication b/w server & CB

ConnectDB	Connects to couchbase
Initializer	Creates Bucket,Scope,Collection
Addbk	Inserts book
Addrv	Inserts Review
Retbk	Creates primary key,Returns books
Retrv	Returns review(s)
